

WHAT IS CLAIMED IS:

1. A method for managing user access to one or more databases, comprising:
receiving an access request for one or more users requesting access to one or more databases;
retrieving server information for the one or more databases;
adding the one or more users to a user group for the database; and
generating an access document for each user.
2. The method of claim 1, further comprising,
creating a member profile for each user of the database.
3. The method of claim 1, further comprising,
transmitting the access document to each user.
4. The method of claim 1, further comprising,
determining a user group type for the database.
5. The method of claim 1, further comprising,
verifying administration authority of a database administrator who processed the access request.
6. The method of claim 1, further comprising:
storing access requests and user access privileges.
7. The method of claim 1, wherein the access request specifies one or more types of access being requested.
8. The method of claim 1, wherein the server information includes a server name and an IP address.
9. The method of claim 1, wherein the user group comprises a name and address book.

10. The method of claim 1, wherein the access document includes an access button which automates creation of an connection document on a user/client system for connecting to a server having a requested database.

11. A system for managing user access to one or more databases, comprising:

a storage device for storing one or more server definitions, one or more application definitions, one or more access definitions, one or more access requests, and one or more connection templates; and

a processor configured to:

receive an access request for one or more users requesting access to one or more databases;

retrieve server information for the one or more databases;

add the one or more users to a user group for the database; and

generate an access document for each user.

12. The system of claim 11, wherein the processor is further configured to create a member profile for each user of the database.

13. The system of claim 11, wherein the processor is further configured to transmit the access document to each user.

14. The system of claim 11, wherein the processor is further configured to determine a user group type for the database.

15. The system of claim 11, wherein the processor is further configured to verify administration authority of a database administrator who processed the access request.

16. The system of claim 11, wherein the processor is further configured to store access requests and user access privileges.

17. A signal bearing medium, comprising a program which, when executed by a processor, performs an operation for managing user access to one or more databases, the operation comprising:

receiving an access request for one or more users requesting access to one or more databases;

retrieving server information for the one or more databases;

adding the one or more users to a user group for the database; and

generating an access document for each user.

18. The signal bearing medium of claim 17, wherein the operation further comprises creating a member profile for each user of the database.

19. The signal bearing medium of claim 17, wherein the operation further comprises transmitting the access document to each user.

20. The signal bearing medium of claim 17, wherein the operation further comprises determining a user group type for the database.

21. The signal bearing medium of claim 17, wherein the operation further comprises verifying administration authority of a database administrator who processed the access request.

22. The signal bearing medium of claim 17, wherein the operation further comprises storing access requests and user access privileges.

23. The signal bearing medium of claim 17, wherein the access request specifies one or more types of access being requested.

24. The signal bearing medium of claim 17, wherein the server information includes server name and IP address.

25. The signal bearing medium of claim 17, wherein the user group comprises a name and address book.

26. The signal bearing medium of claim 17, wherein the access document includes an access button which automates creation of an connection document on a user/client system for connecting to a server having a requested database.
